Note An option that is IN the money or would be in the event of the parallel shift calculated in 45 or 46 or more should be assigned a maturity (i.e re-pricing) date equal to the expiry date of the contract. This affects data elements 12 and 26 (options).

1 An option that is OUT of the money and would remain so in the event of the parallel shift calculated in 45 or 46 or more should be assigned to the 'overnight to 3 month' maturity band. This affects data elements 12 and 26 (options).

An option within these two bounds should have its re-pricing date determined by simple straight line interpolation - e.g. an option exactly at the money, would be assigned a notional maturity date halfway between overnight and the contract expiry date
